

## Removing and installing loudspeaker trim (centre)

### Note

Proceed very carefully when removing and installing as the loudspeaker trim can be damaged quite easily.

### Removing

- Using a small screwdriver, carefully disengage loudspeaker trim -1- from retaining pins (rear, as seen in direction of travel) -arrow A-, but only pull upwards about 10 mm.

### Caution

Take care not to pull loudspeaker trim up any further as this would cause retaining pins at (front, as seen in direction of travel) to break off.

- Push a long screwdriver all the way through under loudspeaker trim towards front until it makes direct contact with front retaining pin (right-side).
- Carefully rotate screwdriver about its own axis -arrow B- until retaining pin -1- disengages from guide -2-.
- Repeat procedure for other retaining pins.

### Installing

Installation is carried out in the reverse order; note the following:

**Notes for installation: tightening torques, renewing components etc. → Chapter „Exploded view - dash panel“**
